EXPERIENCE

February 2017 -October 2017 (Contract)
CAPGEMINI

Front End Engineer - ReactJS

- Create reusable interactive front-end components for scalable UI applications
- Incorporate Redux-Thunk and Redux-Promise libraries to coordinate asynchronous actions and integrate with API backend
- Write end-to-end tests using Mocha and Chai when implementing new features through test driven development
- Modify Ruby on Rails or NodeJS backend API to return new data requested from front-end

June 2016 - December 2016
INVESTORS BANK

Branch Manager

- Responsible for all aspects of opening and managing a new retail bank, including managing a staff of 7, exceeding sales target of \$10M goal (by 60%), generating an action plan for team members and maintaining operational integrity
- Partnered with departments such as new account verification and anti-money laundering, to implement procedures ensuring compliance policies were followed throughout organizational expansion
- Review daily branch statistics, balance flow, obtain feedback from team members and customers to determine course of action

Franco Cappitta

Software Engineer

PROJECT INFO

Puddlr.co

An easy way for people to find carpool for their commute to work

- Implemented using RSpec Test Driven Development process to guarantee functional and maintainable code
- Created custom validations to control flow, ensure clean data, and display error messages to the user
- Produced analytics using ActiveRecord queries through diligent domain model planning
- Designed a responsive user interface with custom CSS to accommodate varying screen sizes and input methods

BudgetButler.co

A platform to budget money and analyze spending habits with real-time chart generation

- Used React and Redux to manage application state and provide instant on-screen updates
- Formed custom database queries to filter transaction data based on month and year
- Imported Chart.js to present visual comparisons and make personalized recommendations about spending
- Employed Javascript Web Token with Ruby on Rails to authenticate users and maintain session state

BattleOfWits.co

An online trivia game where friends can compete

- Utilized AJAX requests to render seeded trivia data returned from a Ruby on Rails helper API
- Designed front-end using Materialize framework with custom CSS
- Built Ruby on Rails API to allow for random gameplay through question database

ADDITIONAL EXPERIENCE

July 2015 - June 2016

SANTANDER BANK

Branch Manager

- Partnered with data analysts to create daily tracking for all branches to help drive the smooth transition to a profit and loss ranking model
- Presented to other districts on best practices for succeeding in a profit and loss environment and raising performance with newly developed tracking tools
- Conducted mock audits in various branches to increase and advise on their preparation and documentation for top ratings
- Exercised the sports coaching method to help team members grow, leading to increased referrals, acceptance of additional responsibility, and expanded skills

November 2014 - July 2015

J.P. MORGAN CHASE

Relationship Banker

- Exceeded top tier incentive range within first month, and established a consistent pipeline for continued sales success
- Engaged in financial planning with affluent clients in order to strengthen relationships and maintain portfolios within the institution
- Enhanced managerial skills with district and branch manager by applying mentoring techniques for staff of 30
